

A Gartner Cool Vendor and Leader in CPS Posture Management

“Cool Vendors deliver innovative, impactful solutions shaping the future of their markets.”

— Gartner, *How to Secure Enterprise Hosts Using Hardening Baselines*

Why It Matters

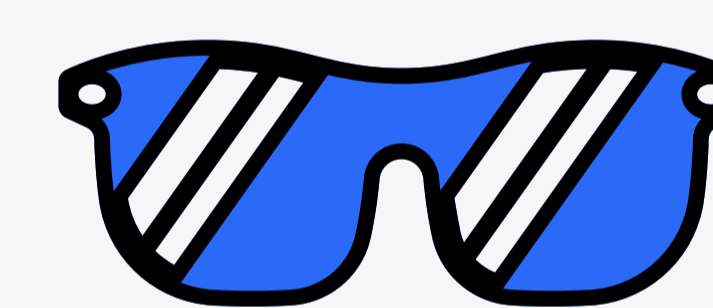

Cyber-Physical Systems (CPS) keep the world running, but they're uniquely vulnerable:

- **Misconfigurations** and insecure defaults
- **Excessive privileges** and unnecessary programs
- **Operational silos** between IT, Security, and Operations

A single weakness in these environments can cascade into disruption; Monitoring alone is NOT enough. Thankfully, there's Remedio.

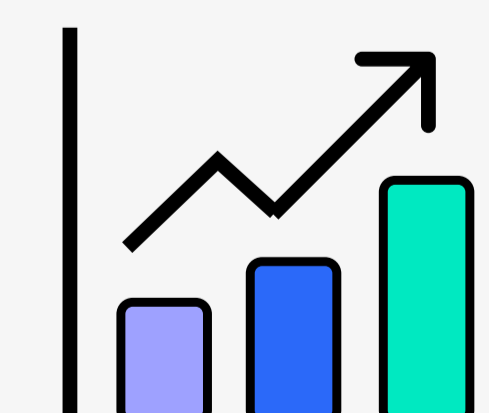

Why We're Cool

- **Unified Visibility:** Windows, Linux, Mac, VDIs, AD, and cloud environs.
- **Smart, Safe Remediation:** Move beyond detection with dependency mapping, impact analysis, and rollback.
- **Smarter Compliance:** Build-your-own frameworks that adapt trusted standards (NIST, CIS, STIG) to your real-world environment.
- **Actionable Value:** Our in-platform ROI calculator turns remediation results into measurable business outcomes.

Changing the Game for CPS Security

- Reactive detection → **Proactive remediation**
- Silos and misalignment → **Unified collaboration**
- Rigid compliance → **Tailored, pragmatic frameworks**
- Vanity metrics → **ROI and outcomes that matter**

Want to see why Gartner named us a Cool Vendor? Let's talk.
