

Company Overview

One Platform for safe, autonomous remediation at scale
Find it. Predict it. Fix it. Verify it.

Finding Risk Is No Longer Enough

Organizations have invested heavily in tools that identify vulnerabilities, misconfigurations, compliance gaps, unmanaged applications, and AI risk. Visibility has improved dramatically, yet cyber exposure continues to grow, because finding risk does not reduce risk.

The risk organizations face today isn't just an open port or an unpatched OS. It's an over-privileged AI agent, a rogue browser plugin, or shadow AI silently exfiltrating data. Breaches start where users work, and traditional tools only flag the problem, leaving remediation to slow, error-prone manual effort.

92%

Of attacks hit the edge

Targeting local OS settings, browsers and AI agents.

83%

Of breaches stem from configuration errors

Misconfigurations and drift leave the door wide open.

6 Months

Average exposure window

Manual remediation is too slow to close the gap.

The future of cybersecurity is not finding risk faster. It is eliminating risk faster.

We Fix What Others Find

The cybersecurity industry optimized for visibility. Remedio optimizes for elimination. Rather than stopping at discovery and prioritization, Remedio continuously reduces cyber exposure by taking action, moving organizations beyond dashboards, tickets, and backlogs to measurable risk reduction.

Most security programs can tell you what's wrong. Few can tell you what actually got fixed, when, and what it was worth. Remedio closes that gap: every autonomous action from a patched CVE or a hardened configuration, to a revoked AI agent permission, is validated, executed, and logged, then rolled up into a real-time picture of exposure eliminated across the estate.

Exposure is reduced, not just reported. Security and IT leaders get audit-ready evidence of what changed and why, plus a defensible ROI figure (hours saved, risks removed, compliance gained) they can bring to auditors, boards, and budget conversations. The metric that matters shifts from tickets opened to risk closed.

Find

Discover all exposures across your environment

- Vulnerabilities
- Misconfigurations
- Compliance gaps
- Unmanaged applications
- AI risk and Shadow AI

Predict

Map dependencies. Predict impact. Determine the safest path to remediation.

- **Dependency intelligence**
Map relationships and dependencies
- **Business context**
Understand criticality and usage
- **Risk assessment**
Prioritize likelihood and business impact
- **Remediation path**
Recommend the safest, highest-impact action

Fix

Execute the right remediation autonomously, with control.

- **Patch**
Apply relevant, tested patches
- **Reconfigure**
Correct settings and drift
- **Harden**
Apply secure baselines
- **Remove**
Uninstall or decommission risky items
- **Block**
Block, quarantine, or restrict
- **Govern**
Manage AI agents and tools

Verify

Confirm outcomes. Detect drift. Prove risk reduction.

- **Validate**
Confirm pre-execution readiness
- **Verify**
Confirm remediation was successful
- **Roll back**
Instantly revert if issues detected
- **Monitor drift**
Continuously monitor for changes and new risk
- **Prove risk reduction**
Quantify risk eliminated and time saved

One Platform for Total Posture Control

Remedio is the autonomous exposure remediation platform that closes the loop between risk detection and correction, at machine speed. It is the first platform to unify device hardening, vulnerability remediation, compliance, application control, and AI agent governance, eliminating configuration drift and shadow AI risk at scale, with zero disruption and instant rollback.

How it works: Deploy an ultra-lightweight sensor (under 7MB) or operate agentlessly for network devices, cloud assets, and AI tooling. Reveal configuration drift, compliance gaps, unpatched vulnerabilities, and shadow AI agents. Recalculate risk using dependency mapping to predict business impact before any fix is applied. Remediate safely with policy-controlled, automated fixes. Revert any action instantly if an exception is required. Report time saved, risk removed, and compliance gains through built-in, audit-ready ROI reporting.

Five Modules. Total Coverage.

Everything required for modern endpoint security management, configuration security, vulnerability management, compliance, application control, and AI governance, in a single, integrated platform.

Remedio Baseline

Master Configuration Hygiene

The essential security foundation included in everything Remedio does. Baseline establishes and enforces your Golden Image across every endpoint, continuously hardening configurations and correcting field drift, risky defaults, and AI misconfigurations across endpoints, servers, and cloud environments.

Remedio AI Govern

Govern Your AI Ecosystem

Discovers, classifies, and governs every AI tool, MCP connection, Skill, model, and agent in the enterprise, bringing shadow AI into the light.

AI Govern remediates risky configurations, blocks unsafe agent behavior, and enforces enterprise AI policy across every device.

Remedio Fortify

Close Vulnerability Gaps

Combines Patch Management and Vulnerability Remediation into one system.

Fortify prioritizes and automatically eliminates critical exposures across the entire estate, from operating-system CVEs to the AI software supply chain, so nothing sits in a backlog.

Remedio Assure

Automate Continuous Compliance

Achieves dynamic, audit-ready compliance against NIST, CIS, MITRE, and custom frameworks, plus every AI deployment policy.

Assure continuously monitors and enforces regulatory standards and generates the audit evidence teams need to stay always audit-ready.

Remedio Gate

Control What Runs, and Where

Granular application control over every executable in the environment.

Gate automatically removes unwanted AI tooling, agents, and IDE plugins, uninstalls unauthorized software, and blocks malicious browser extensions before they create exposure.

Outcomes You Can Trust.

Visibility Becomes Intelligence	Changes Become Predictable	Remediation Becomes Scalable	Value Becomes Undeniable
Surface every exposure from unpatched vulnerabilities and OS drift to Shadow AI agents. Understand the full context before you act. Zero blindspots.	Eliminate the “fear of fixing.” Predict every outcome with dependency mapping and context-aware validation. Zero surprises.	Scale your security team without adding headcount. Apply safe, instant fixes and removals across millions of assets. Zero friction.	Stop guessing ROI. Prove compliance and risk reduction with audit-ready reporting that quantifies every second saved. Zero doubt.

Trusted by the World's Top CISOs

Remedio is trusted by Fortune 500 organizations across manufacturing, financial services, healthcare, government, and education, with deployments spanning millions of devices.

“Remedio gives our team incredibly detailed visibility into our global computing environment.”

Alexander Schuchman, CISO, Colgate-Palmolive

“Remedio gives us the ability to fix problems in our environments without impacting our operations; it's a real game-changer.”

Michael Meis, Associate CISO, KU Health System

“Remedio gives us compliance, visibility, and remediation for 100% of endpoints and servers. All the time.”

Jony Fischbein, Global CISO, Check Point
